Professional Summary

Software Engineer with nearly 3 years of professional experience developing backend and mobile applications using Go and Kotlin. Experienced in backend API development, Jetpack Compose, REST services, PostgreSQL, database optimization, authentication, access control, real-time communication, and distributed application workflows

Technical Skills

- **Languages**: Go, Kotlin, Python, TypeScript, Dart
- **Backend**: Gin, Node.js, REST API design, WebSockets, OAuth 2.0, RBAC, serverless functions
- **Android**: Android SDK, Jetpack Compose, Coroutines, Flow, MVVM/MVI, Retrofit, OkHttp, Ktor Client, WebRTC
- **Databases**: PostgreSQL, MongoDB, Firebase, schema design, indexing, query optimisation
- **Architecture**: Clean Architecture, microservices, modular design, asynchronous workflows
- **Testing & Quality**: Unit testing, integration testing, regression testing, debugging, performance optimisation
- **DevOps & Tools**: Git, GitHub, CI/CD, Postman
- **Practices**: Agile, Scrum, code review, technical documentation

Professional Experience

- **Software Engineer** — Aug 2025 – Aug 2026
  SDLC Corp — *Noida, India*
  - **Backend & API Integration**: Designed and integrated REST API contracts between mobile clients and backend services, coordinating request/response models, authentication, error handling and business workflows with backend engineers.
  - **Architecture & Code Quality**: Led the Android engineering team by defining coding standards and architecture guidelines, conducting code reviews and mentoring developers on modular design, maintainability and engineering best practices.
  - **Legacy Refactoring**: Refactored a legacy fintech application into a layered architecture, reducing coupling between business functionality and shared application components and enabling new business verticals to be delivered independently.
  - **Security & Access Control**: Designed role-based access control for 5 user types, mapping roles to permitted screens, actions and API operations while enforcing authentication and authorisation throughout application workflows.
  - **Backend Communication**: Replaced Retrofit with Ktor Client across the networking layer, standardising REST communication, request handling, authentication, retries and error handling.
  - **Business Functions**: Delivered payment, e-commerce and taxi-booking functionality by collaborating with backend and design teams on API contracts, data flows and end-to-end customer journeys.
- **Software Engineer** — Feb 2025 – Aug 2025
  NS Ventures — *Stockholm, Sweden (Remote)*
  - **Backend Development**: Built serverless backend services using Node.js and Firebase Cloud Functions, implementing authentication, database operations, file storage and APIs consumed by mobile and web applications.
  - **Full-Stack Delivery**: Delivered 4 mobile applications and 2 web applications from client requirements through architecture, development, testing and production release while working remotely across time zones.
  - **API & Data Design**: Designed backend data models and API workflows supporting authentication, user journeys, application state and communication between web, mobile and backend components.
  - **AI Integration**: Collaborated with backend and machine learning engineers to integrate AI-powered functionality into production web applications and connect AI services with application workflows.
  - **Technical Collaboration**: Worked with clients, backend engineers and developers to translate business requirements into technical tasks, API requirements and deliverable software increments.
- **Software Developer** — Jan 2024 – Feb 2025
  Technia Infotech — *Gurgaon, India*
  - **Performance Engineering**: Identified database bottlenecks and improved query performance by 25% through indexing and restructuring frequently accessed data; refactored backend and application workflows to improve real-time update performance.
  - **Real-Time Systems**: Built real-time communication functionality using WebRTC and Socket.IO, supporting live video streaming, chat, emotes and interactive viewer events for a social gaming platform.
  - **Payments**: Integrated Razorpay for creator payouts, viewer payments and in-app purchases, implementing payment workflows and associated application state transitions.
  - **Production Development**: Developed and maintained production features using Clean Architecture and MVI, collaborating with engineers to deliver customer-facing functionality and resolve production issues.

Education

- **MSc in Advanced Computing Science** — Sept 2026 – Sept 2027
  University of East Anglia, Norwich, United Kingdom
- **BS in Computer Application** — May 2021 – May 2024
  Panjab University, Chandigarh, India
